# pCon

Productivity at the highest level
with pCon.planner PRO

Contents of this guide

It provides an overview on the **main features** of pCon.planner PRO*.
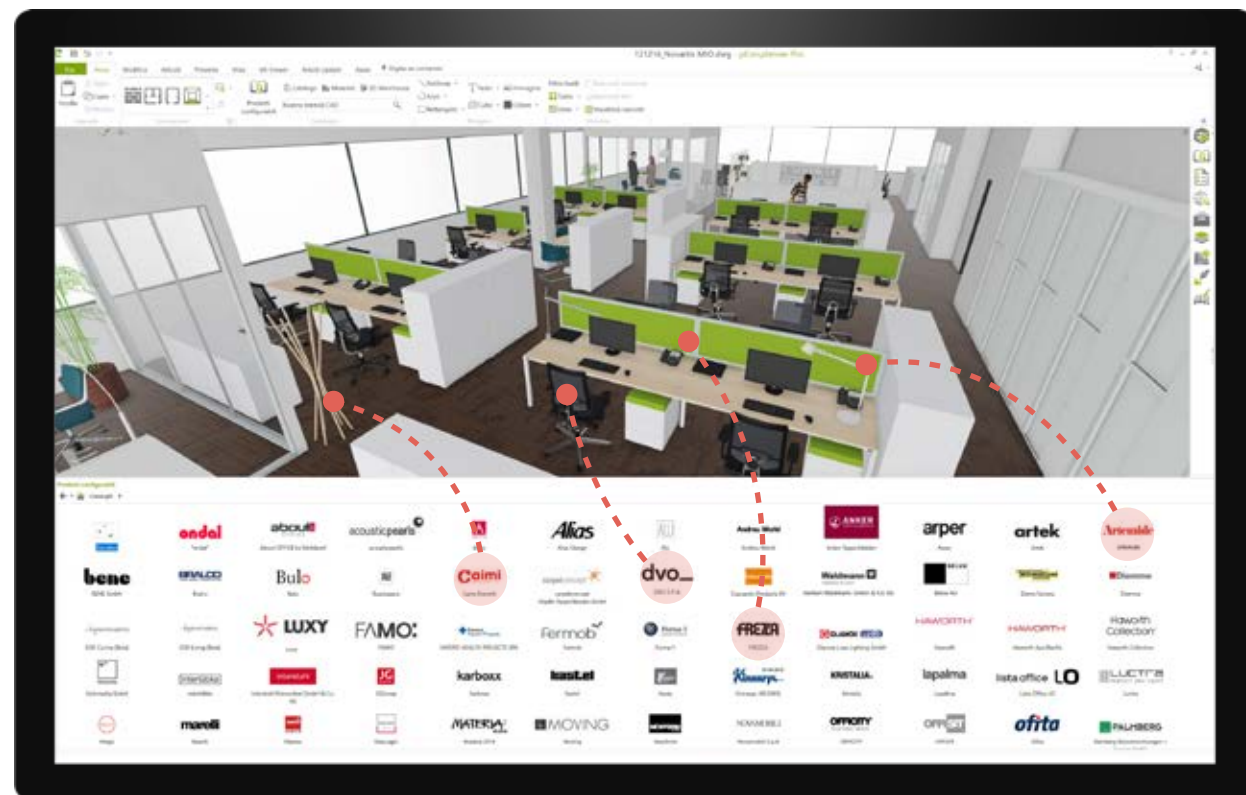

*Comparing with pCon.planner ME

Manage data

Space planning

Present

Investment

Multiple manufacturers in the same session

Use configurable data of different manufacturers in the same work session.

Easily **compare** products to find the right one. Increase work **efficiency** by creating a single article list.

Maximum integration with the sales team

If a project starts with pCon.facts or pCon.basket you can import the OBK file – all products will be **automatically inserted** in your project.

The products will be arranged in a linear manner; you'll only have to place them.
Organize your project

Clarity is essential for customers.

The **Folder Manager** allows you to divide the project into folders for each area.

The article list will reflect the folder structure, offering a **quick and intuitive** overview.
Add your own products

Import external geometries and **transform them in commercial products** by assigning information such as codes, prices and descriptions.

Do the same on **existing configurable data**: it's enough to replace the original commercial information.

You'll find them added to the article list with the thumbnail images automatically generated.
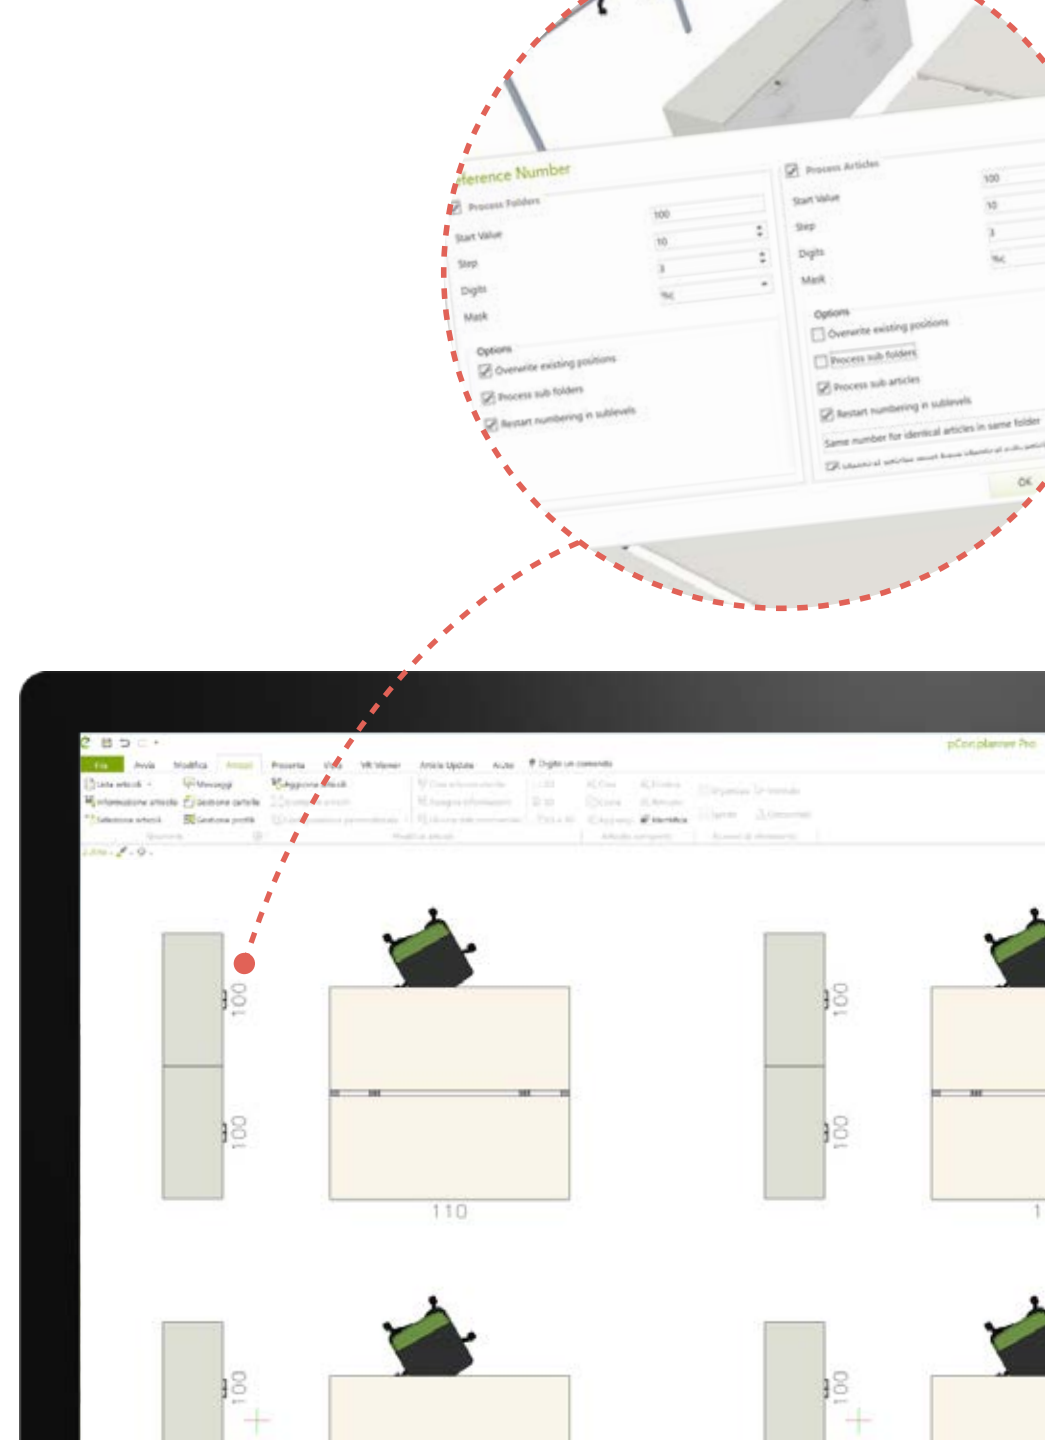

Apply reference numbers

Automatically identify all equal items by assigning unique reference numbers.

Reference numbers can be generated automatically or entered manually.

Useful for **tenders** which identify each article with a certain unique code, but also during the **installation phase**.
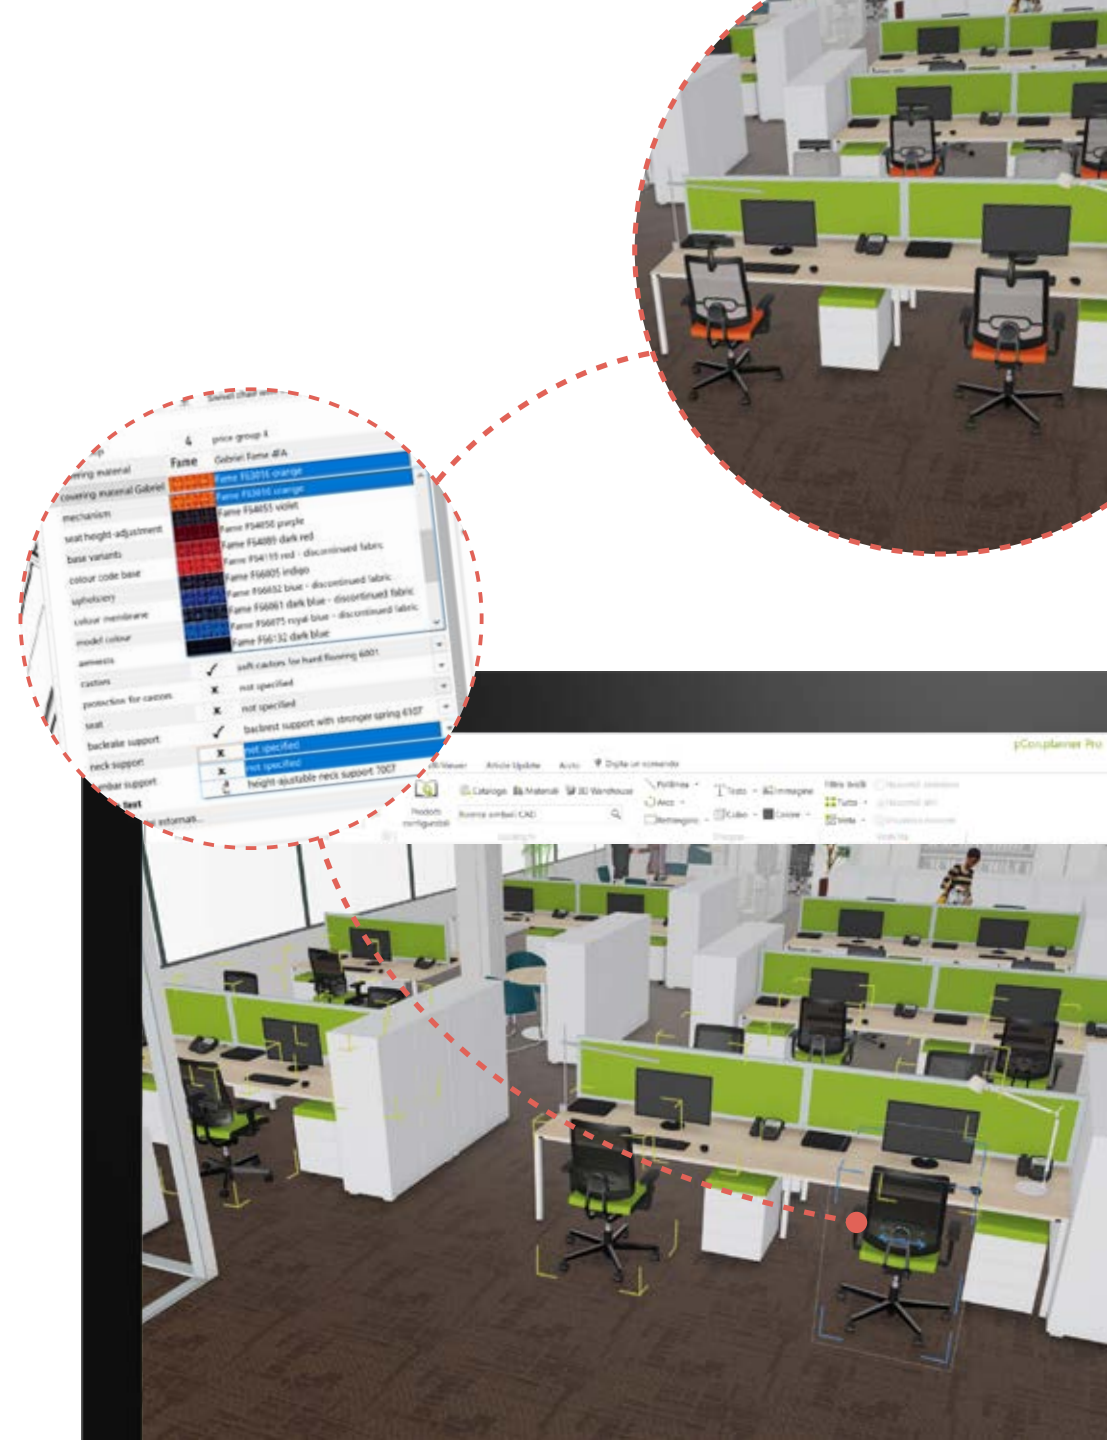

Trickle down editing

With **reference copy** create an unlimited number of connected articles.

Apply a change to any one of these articles and it will be automatically applied to all others.

Quickly select articles

Define **selection filters** to commercial articles such as manufacturer, serie, code, text or layer.

Move, delete or replace selected articles in a heartbeat.

Independent 2D and 3D data
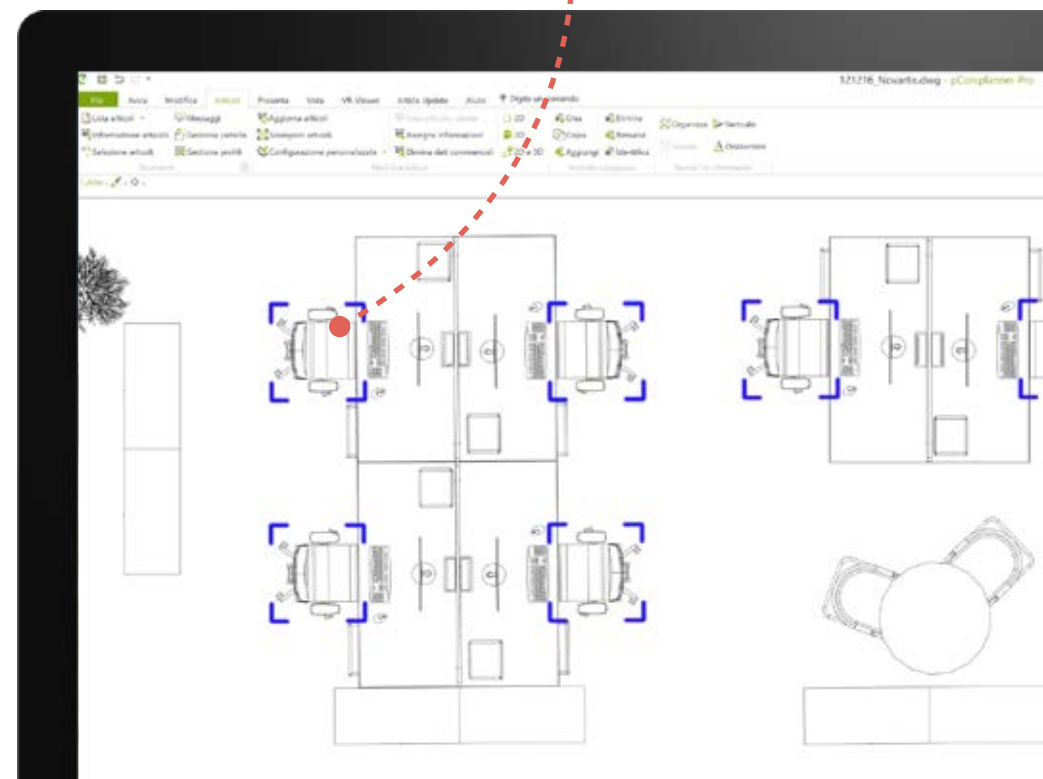

Send projects to your customers with **only the data you want**.

Manage the 2D and 3D information of configurable data separately to lighten large files and to share only the necessary information.

Import PDFs

How frequently do you get floor plans as a PDF?

With the import wizard, PDFs are **automatically converted** to vector elements or images.

Define the scale with just one click.

Maximum flexibility in dimensioning

Use the advanced dimensioning functions to **customize** styles lines, arrows, text and much more.

You can define your **personal look** to apply to all your projects.
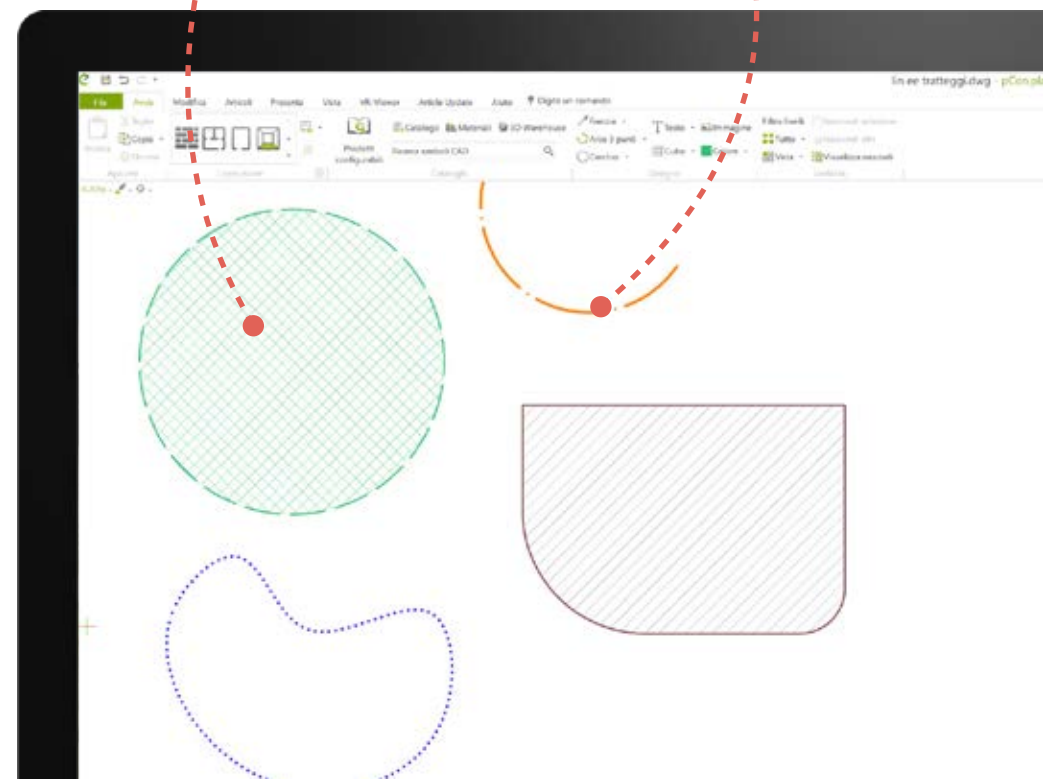

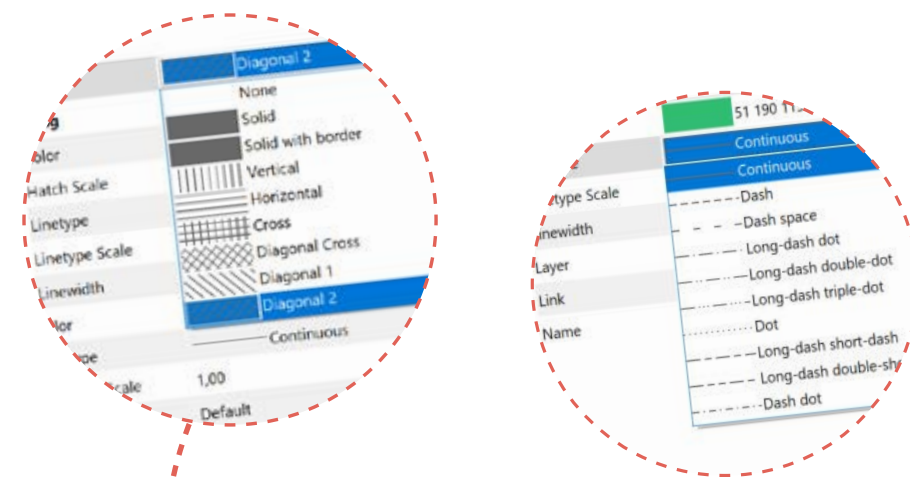

Lines and hatches

Create shapes and lines that answer your planning needs.

The different types of lines and hatches allow for innumerous combinations, helping to **differentiate the various project areas**.

Maximum flexibility with multiple sessions

Run multiple concurrent sessions of pCon.
planner PRO to work with i**ncreased speed**.

Move articles from one project to another
simply by dragging them.

## Model with more flexibility

Answer the personalization needs of your customers with extra modeling functions.

With features like **subtract, intersect, merge and follow me** create new geometries to which you can associate commercial information.

Maximum layer control

Create, delete, assign and filter layers in a blink of an eye.

For complex projects the Filter Editor will be of great help. Through conditions and logic operations you can **manage the visibility and selection of layers**.

Show what you need

Select in the layer panel what to display for **each single view**.

Create several perspective views with different information. For example, hide 2D layers in a particular view, keeping it visible in the others. Do the same with walls, articles, acoustic information and much more.
Complex walls in a second

Build **irregular walls** simply by tracing the profile. Any architectural element placed in this wall segment will be automatically recognized.

Change a **wall's thickness** while you build, by measuring it directly from the floor plan.
Resin floor
12,32 m²
16,14 m

Tiles
23,83 m²
19,96 m

Kitchen surface
36,15 m²
36,10 m

More flexible floors

Easily split floors to apply **different materials**.

Automatically display information such as floor **surface or perimeter** - with the possibility to customize each text field.

No compromise

Do not set limits on your work: **import** and **export** geometries in a variety of different formats.

Quickly exchange your projects with partners or other professionals without compatibility problems.

DWG DWT DGN SKP GLB

STEP SAT 3DS DAE OBJ USD

IGES SAB SVG STL FBX GLFT

Design spaces based on reality

Import a **point cloud** (e57) which is a set of data points in 3D space, generated by a LiDAR scanner.

Create **highly accurate 3D models** of interior spaces which you can use to create floor plans, analyze furniture layouts and other design elements. Make more informed design decisions.
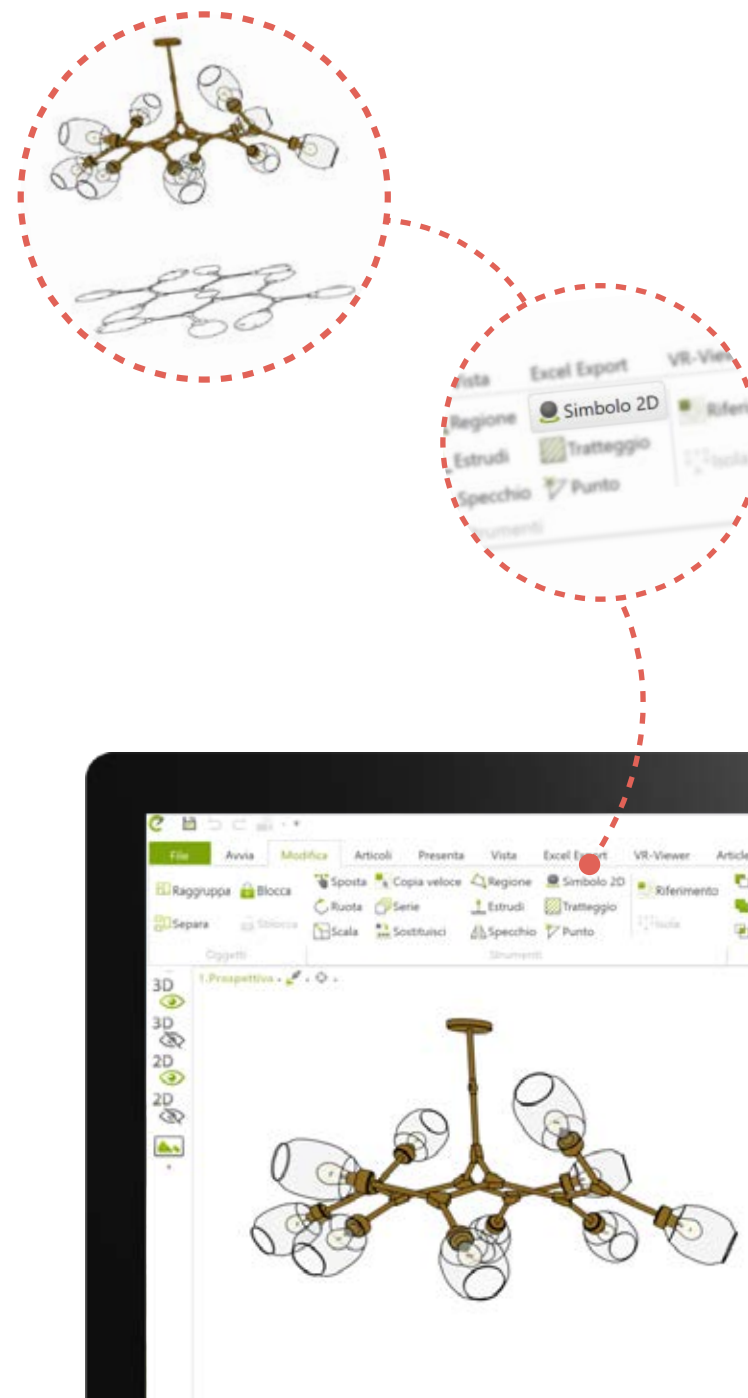

Automatic creation of 2D geometries

Instantly create a 2D geometry of any 3D one, be it downloaded from 3D Warehouse, created directly by you or by modifying an existing one.

The 2D layer will **automatically be associated with the geometry**, so you can easily control its visibility.
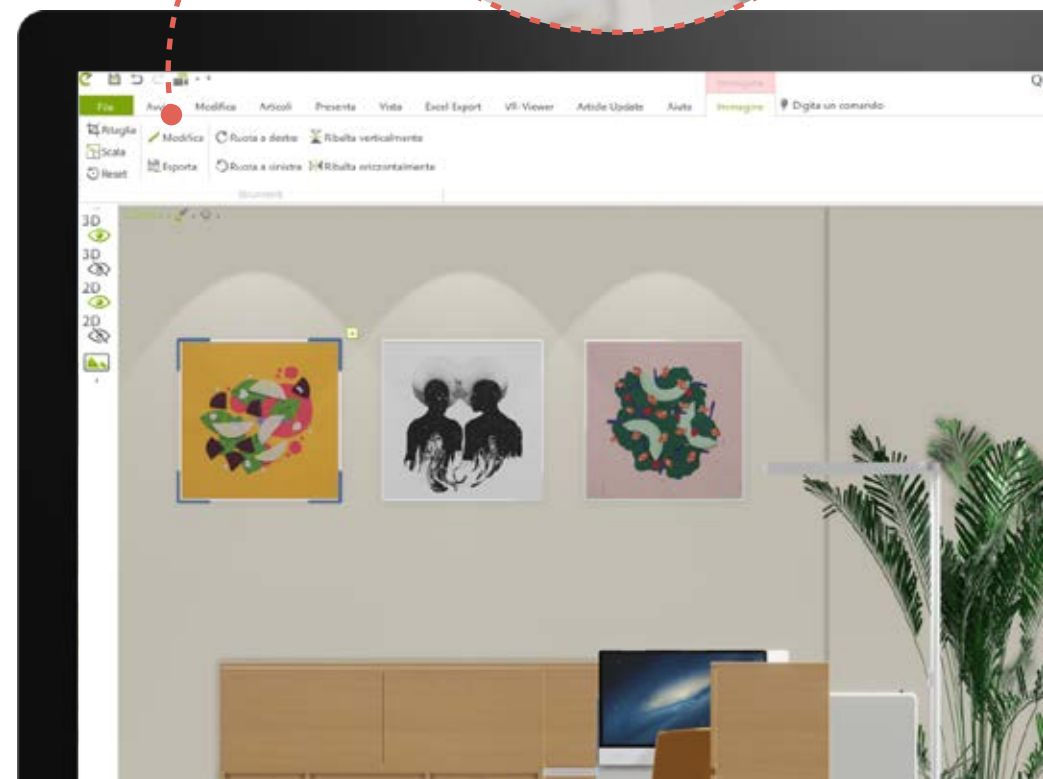

Edit images directly in pCon.planner

You can scale, crop and adjust parameters such as contrast, saturation and hue. The editor is available in the planning and layout area and in the material editor.

The use of external applications is no longer necessary to adjust images, thus obtaining a more **efficient work process**.
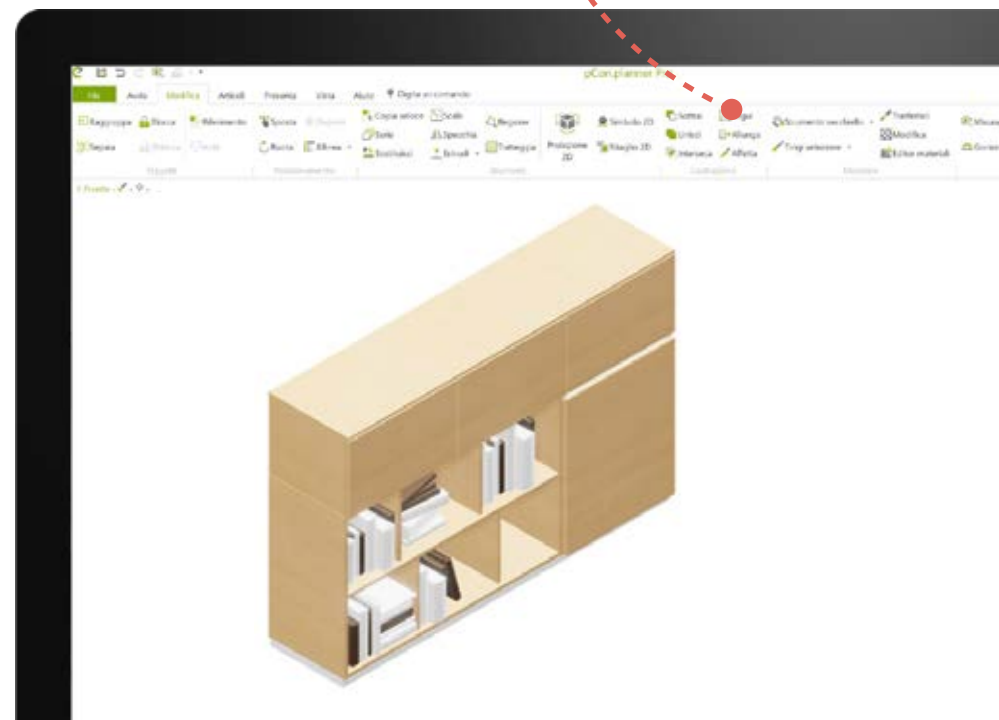

Stretch geometries

With the **Stretch command** you can intelligently stretch or shorten any geometry starting from the point you want, on all three axes.

Easily create customized items or simulate different measurements in seconds.
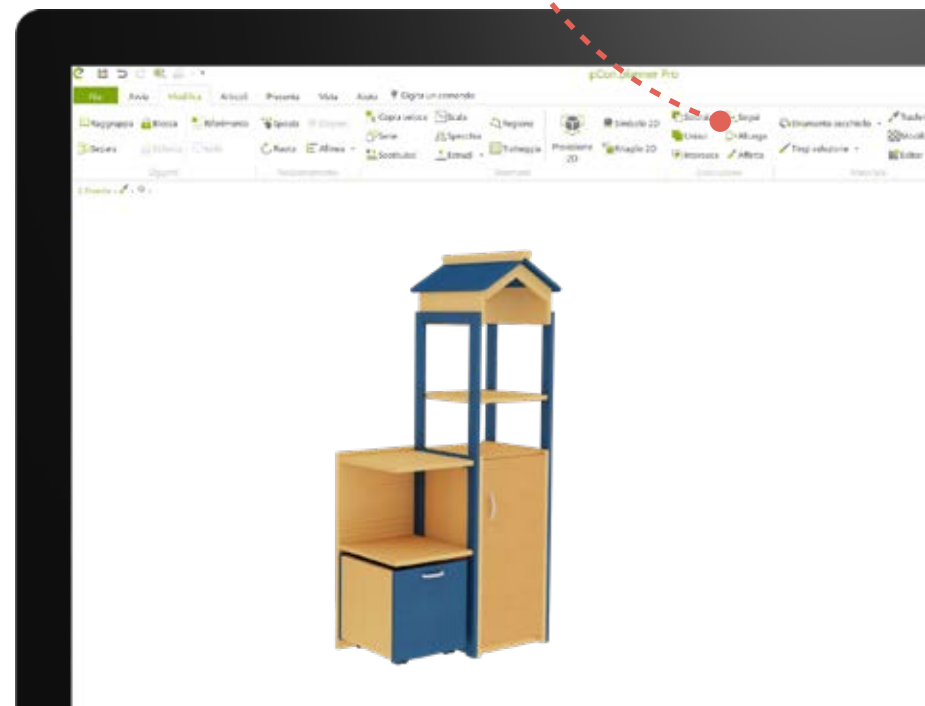

Cut geometries

You can cut 2D and 3D geometries on any axis in a second.

Change objects, present project sections and add valuable technical product information.

Crop 2D floor plan

Easily crop 2D floor plans to present and work on only what really matters.
No more unnecessary information.

Instant 2D projections of any object

Select an object and **automatically generate** a 2D vector projection.

Choose the side interactively or use the pre-set multiple views. Export in SVG format to use in Illustrator or PowerPoint.

Present products at their best

Do not overlook any details when you present a project!

With the **Snapshot** function you can assign any external image to a commercial element which will be visible in the article list.

Your clients will have a clear understanding and the best possible impression.
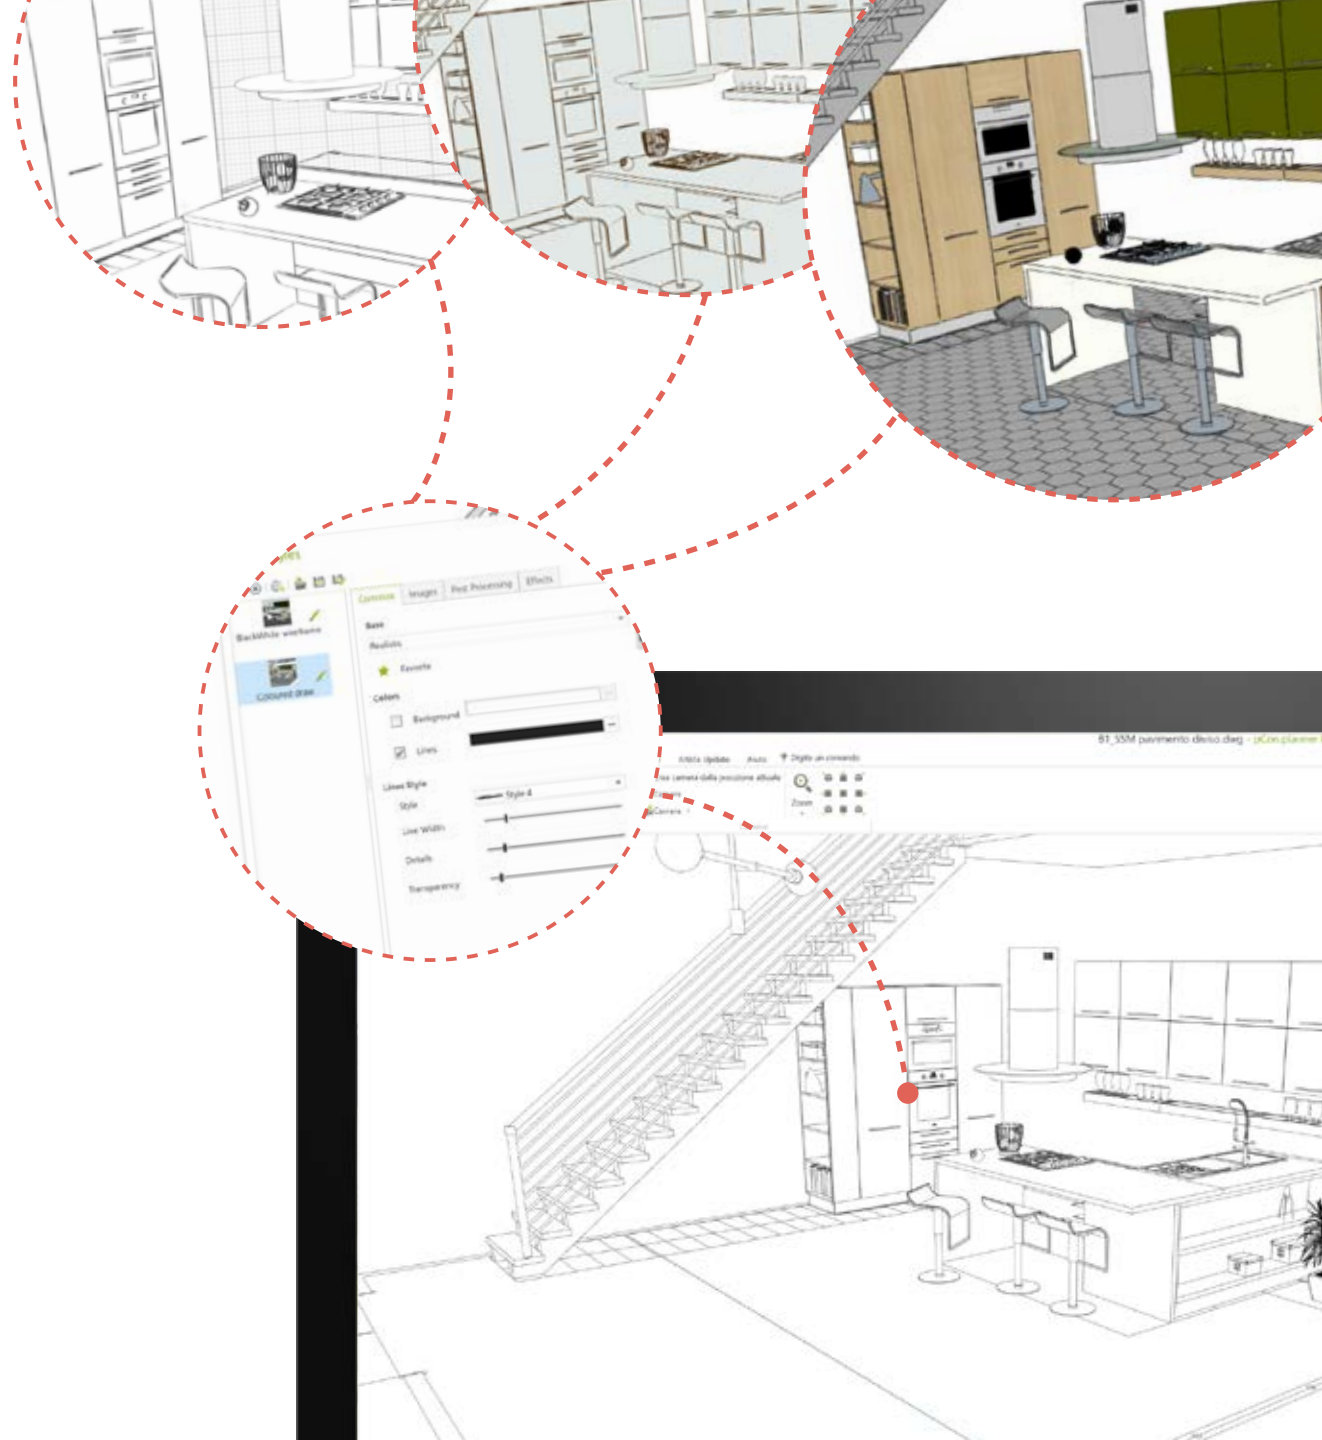

Give a personal touch to your projects

Render styles allow you to add a touch of originality by customizing lines, solids, add background images and much more.

You can also change brightness, contrast, saturation and color ranges.

Create **your own style** or use one of the ready-to-use templates.

Boost your presentations

Copy 3D elements from your project and paste them into the your PowerPoint* presentation.

Use **PowerPoint's built-in functions** such as flip up or down, rotate, apply an animation or combine it with other elements of the presentation.
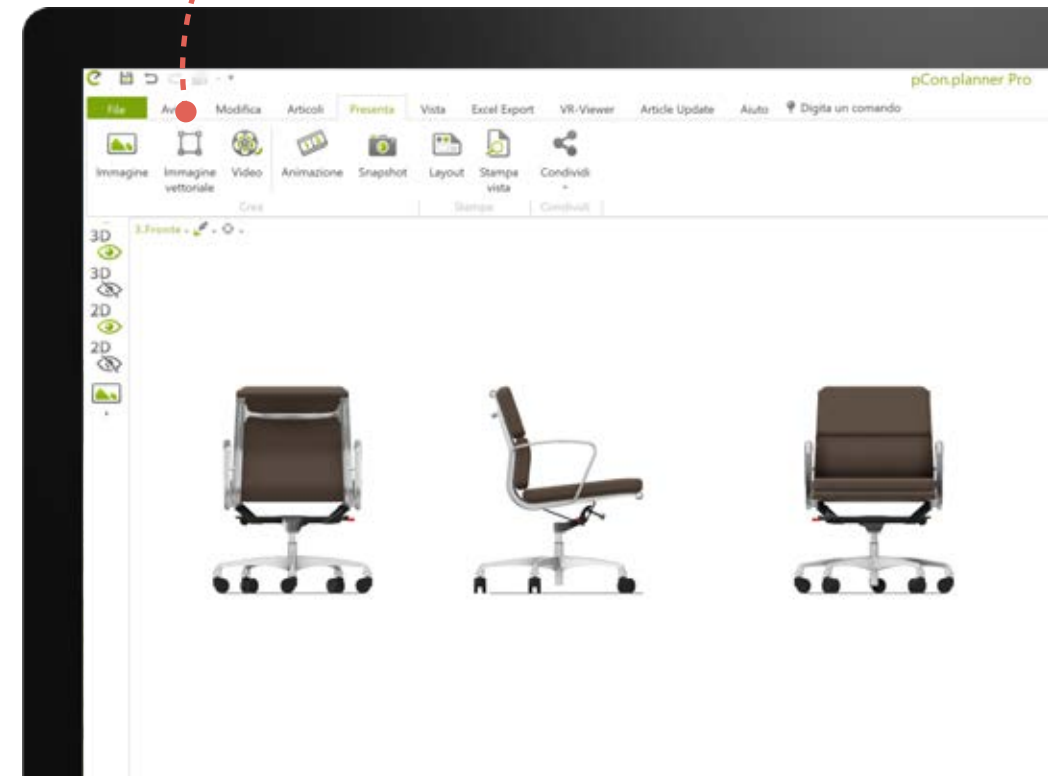

Impress your customers!

*Compatible with Office 365 or Office 2019

Exporting vector graphics

Transform every view and element of your scene into vector graphics. Guarantees **the highest quality and scalability** in the creation of your floor plans.

Export to PDF, SVG, EMF, DWG/DXF.

Advanced print layout

Create **custom** print layouts or imports a DWT template.

Insert windows to show different project views - **adjust the size**, position and align them in the sheet with a series of dedicated functions.

For each window you can choose which view of your project to show, with which style and much more.

Advanced print layout

For each area **choose what to show**: walls, roof, dimensions and more.

Add text and dimensions directly on the print layout work area and personalize the appearance.

Use the default **editable title block** or load a personalized one.

Quick export to PDF

You can export your presentation layouts **directly to PDF**, no more need for external PDF printers.

Choose which pages to export and create multi-page documents in **high quality and definition**.
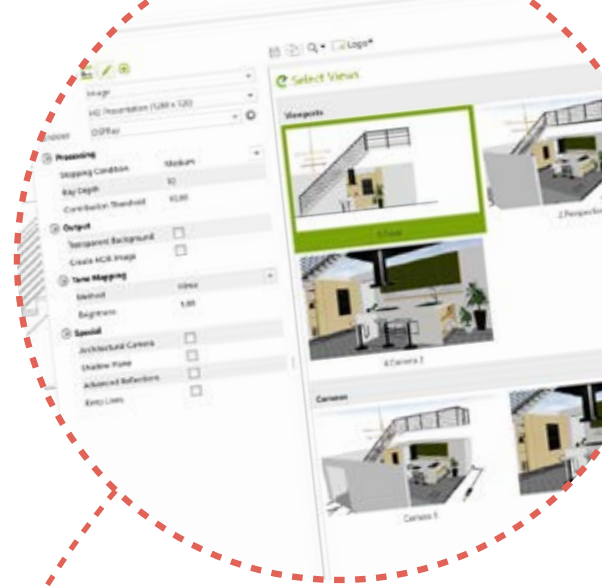

Render multiple views
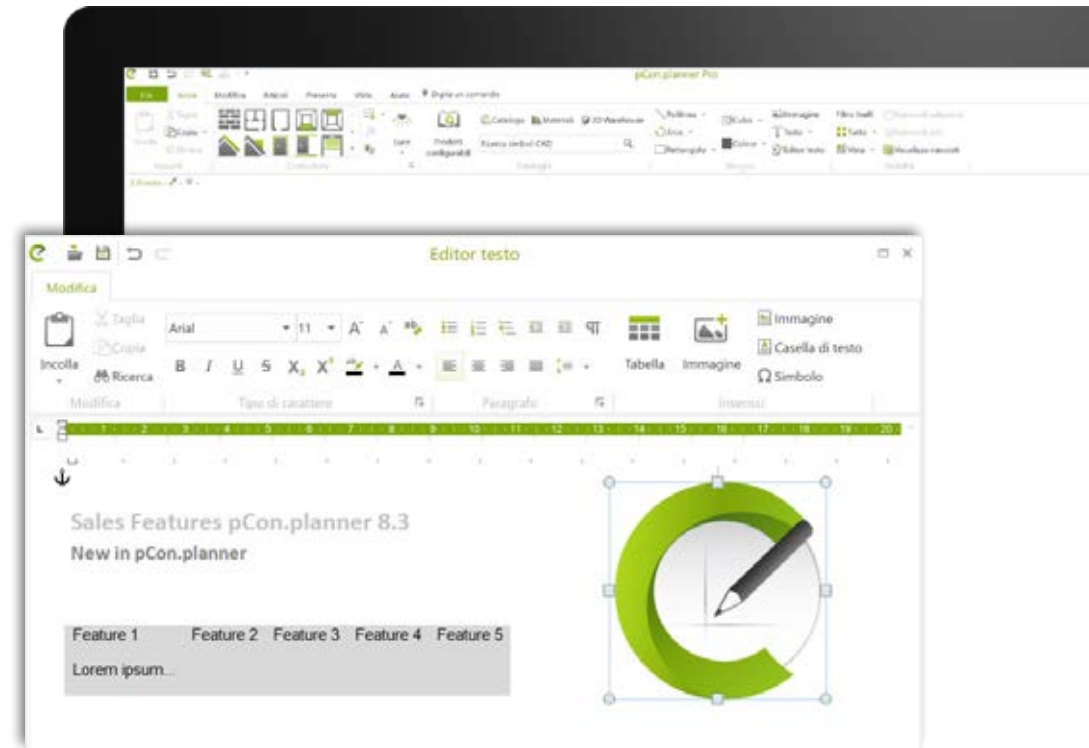

Need to render multiple views of a project?

Batch rendering allows you to run the rendering process of several cameras in the **background** while you keep working.

You will be notified when they are ready.

Advanced text editor

The text editor with advanced formatting allows for more precise text control and greater flexibility in styles.
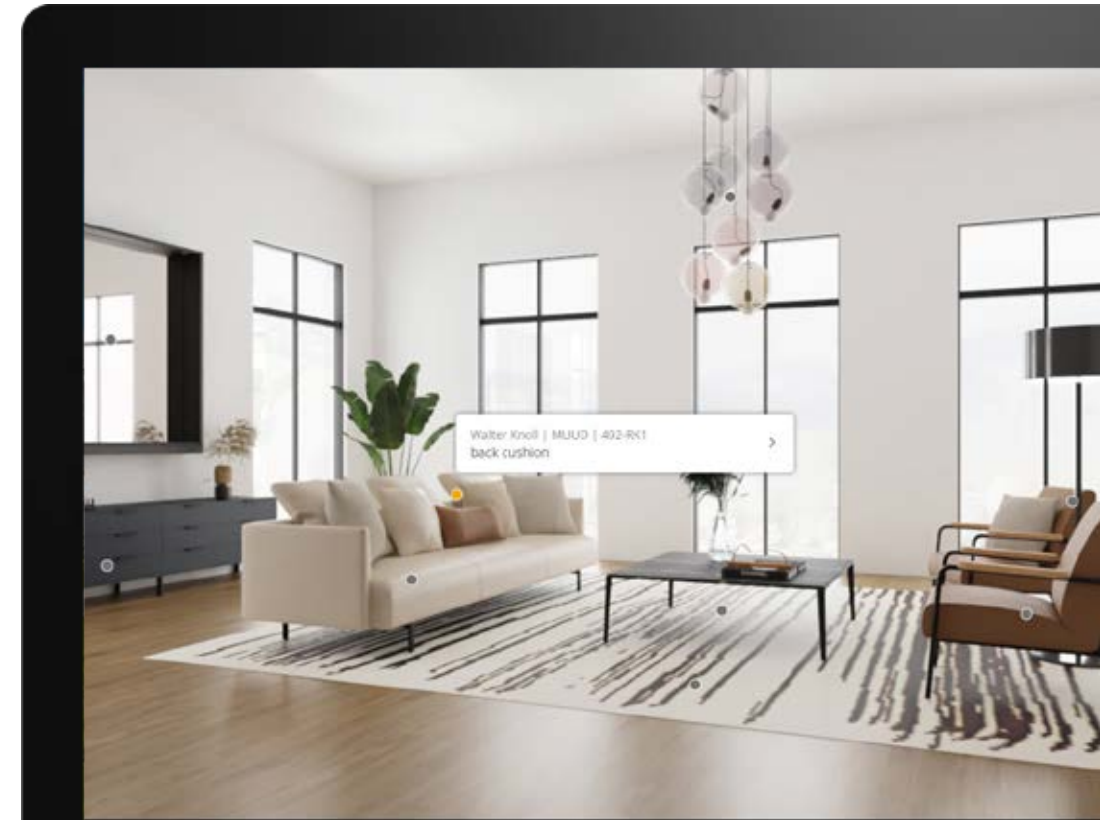

Engage customers with multi content

Integrate product data harmoniously **within a static (or panoramic) image** to provide the customer with information in an interactive way. Upload your content to Impress to easily get a **shareable link** on any device.

pCon.planner PRO is available as a subscription license, assigned to an individual user and it's not bound to any computer.
